To Our Clients and Friends:

As a PRCA and a PBR Stock Contractor and an ABBI Share holder and past president I am embarrassed of the recent findings from the drug testing during the PBR / ABBI Pueblo, Colorado event.

Money and notoriety has led some to a “new way of thinking” they have no regard for the safety, well being and future of the animal athlete. To think a person will cheat or try to win at any cost is alarming to say the least. That makes it a sad time to be a Stock Contractor.

The purpose of the ABBI is to record and preserve the pedigrees while maintaining the integrity and enhance the value of the bucking bull. The ABBI Bucking Bull Events and others like it should enhance and encourage the “best practices” in breeding, training and animal welfare. The competitive purpose and outcome will be to prove superior genetics.

We are very disappointed with the individuals that have enabled the drug use, with no regard for the time, money, effort and wisdom put towards the Bucking Bull Industry.

We are willing to put up our Breeding Program against any other Breeding Program in the county today. It's a Breeding Program not a feeding or drugging program.

Our Bulls buck because of a genetic gene pool that has 30+ years of history. We have had many of award winning animals over the years and plan to have more in the future.

We have never bucked a Bull on any drug of any kind at any time and never will! Crippled Bulls or sick Bulls get time off to rest and or heal until nature says they are ready to perform.

We challenge all Bull Owners, Breeders and Handlers to make this a reputable Industry, don't destroy it with drugs and other reckless rule violations.

The entire Kish herd of bulls has been offered to be tested anytime for any drugs.

As you look at the K Spear branded bulls, cows and heifers we have offered “For Sale” to start or help build your program know one thing for certain, the Kish cattle buck because of 3 decades of great genetics, not drugs.
